

Quad, SPST Analog Switch

MAX4613

General Description

The MAX4613 quad analog switch features on-resistance matching (4Ω max) between switches and guarantees on-resistance flatness over the signal range (9Ω max). This low on-resistance switch conducts equally well in either direction. It guarantees low charge injection (10pC max), low power consumption ($35\mu\text{W}$ max), and an electrostatic discharge (ESD) tolerance of 2000V minimum per Method 3015.7. The new design offers lower off leakage current over temperature (less than 5nA at $+85^\circ\text{C}$).

The MAX4613 quad, single-pole/single-throw (SPST) analog switch has two normally closed switches and the two normally open switches. Switching times are less than 250ns for t_{ON} and less than 70ns for t_{OFF} . Operation is from a single $+4.5\text{V}$ to $+40\text{V}$ supply or bipolar $\pm 4.5\text{V}$ to $\pm 20\text{V}$ supplies.

Applications

Sample-and-Hold Circuits	Communication Systems
Test Equipment	Battery-Operated Systems
Heads-Up Displays	PBX, PABX
Guidance and Control Systems	Audio Signal Routing
Military Radios	Modems/Faxes

Pin Configuration/

Functional Diagram/Truth Table

Rail-to-Rail is a registered trademark of Nippon Motorola Ltd.

Features

- ♦ Pin Compatible with Industry-Standard DG213
- ♦ Guaranteed R_{ON} Match Between Channels (4Ω max)
- ♦ Guaranteed $R_{\text{FLAT(ON)}}$ Over Signal Range (9Ω max)
- ♦ Guaranteed Charge Injection (10pC max)
- ♦ Low Off Leakage Current Over Temperature ($<5\text{nA}$ at $+85^\circ\text{C}$)
- ♦ Withstands 2000V min ESD, per Method 3015.7
- ♦ Low $R_{\text{DS(ON)}}$ (85Ω max)
- ♦ Single-Supply Operation $+4.5\text{V}$ to $+40\text{V}$
Bipolar-Supply Operation $\pm 4.5\text{V}$ to $\pm 20\text{V}$
- ♦ Low Power Consumption ($35\mu\text{W}$ max)
- ♦ Rail-to-Rail® Signal Handling
- ♦ TTL/CMOS-Logic Compatible

MAX4613E_-40°C to +85°C

Storage Temperature Range-65°C to +165°C

Lead Temperature (soldering, 10sec)+300°C

Note 1: Signals on S₋, D₋, or IN₋ exceeding V+ or V- are clamped by internal diodes. Limit forward current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Dual Supplies

(V+ = 15V, V- = -15V, V_L = 5V, GND = 0V, V_{INH} = 2.4V, V_{INL} = 0.8V, T_A = T_{MIN} to T_{MAX}, unless otherwise noted.)

Quad, SPST Analog Switch

ELECTRICAL CHARACTERISTICS—Single Supply (continued)

($V_+ = 12V$, $V_- = 0$, $V_L = 5V$, $GND = 0V$, $V_{INH} = 2.4V$, $V_{INL} = 0.8V$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP (Note 2)	MAX	UNITS
DYNAMIC						
Turn-On Time (Note 3)	t_{ON}	$V_S = 8V$, Figure 2		300	400	ns
Turn-Off Time (Note 3)	t_{OFF}	$V_S = 8V$, Figure 2		60	200	ns
Charge Injection (Note 3)	Q	$C_L = 1nF$, $V_{GEN} = 0$, $R_{GEN} = 0$, Figure 4		5	10	pC

Note 2: Typical values are for **design aid only**, are not guaranteed and are not subject to production testing. The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 3: Guaranteed by design.

Note 4: On-resistance match between channels and flatness are guaranteed only with bipolar-supply operation. Flatness is defined as the difference between the maximum and the minimum value of on-resistance as measured at the extremes of the specified analog signal range.

Note 5: Leakage parameters $I_{S(OFF)}$, $I_{D(OFF)}$, $I_{D(ON)}$, and $I_{S(ON)}$ are 100% tested at the maximum rated hot temperature and guaranteed at $+25^\circ C$.

Note 6: Off-Isolation Rejection Ratio = $20\log(V_D/V_S)$.

Note 7: Between any two switches.

Typical Operating Characteristics

($T_A = +25^\circ C$, unless otherwise noted.)

Quad, SPST Analog Switch

Typical Operating Characteristics (continued)

($T_A = +25^\circ\text{C}$, unless otherwise noted.)

Pin Description

PIN	NAME	FUNCTION
1, 16, 9, 8	IN1–IN4	Logic Control Inputs
2, 15, 10, 7	D1–D4	Drain Outputs
3, 14, 11, 6	S1–S4	Source Outputs
4	V_-	Negative Supply-Voltage Input
5	GND	Ground
12	V_L	Logic Supply-Voltage Input
13	V_+	Positive Supply-Voltage Input—connected to substrate

Applications Information

General Operation

- 1) Switches are open when power is off.
- 2) IN_+ , D_+ , and S_+ should not exceed V_+ or V_- , even with the power off.
- 3) Switch leakage is from each analog switch terminal to V_+ or V_- , not to other switch terminals.

Operation with Supply Voltages

Other than $\pm 15\text{V}$

Using supply voltages less than $\pm 15\text{V}$ will reduce the analog signal range. The MAX4613 operates with $\pm 4.5\text{V}$ to $\pm 20\text{V}$ bipolar supplies or with a $+4.5\text{V}$ to $+40\text{V}$ single

Quad, SPST Analog Switch

supply; connect V- to GND when operating with a single supply. Also, all device types can operate with unbalanced supplies such as +24V and -5V. V_L must be connected to +5V to be TTL compatible, or to V+ for CMOS-logic level inputs. The *Typical Operating Characteristics* graphs show typical on-resistance with $\pm 20\text{V}$, $\pm 15\text{V}$, $\pm 10\text{V}$, and $\pm 5\text{V}$ supplies. (Switching times increase by a factor of two or more for operation at $\pm 5\text{V}$.)

Figure 1. Overvoltage Protection Using External Blocking Diodes

Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, followed by V_L, V-, and logic inputs. If power-supply sequencing is not possible, add two small, external signal diodes in series with supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to 1V below V+ and 1V above V-, but low switch resistance and low leakage characteristics are unaffected. Device operation is unchanged, and the difference between V+ and V- should not exceed +44V.
